

Rainwater Harvesting

- **Economy Range**
- High Strength HDPE Bodies
- Above or Below Ground option
- 350 ltr - 6000 ltr sizes available
- Suitable for watering garden
- Suitable for car washing
- Standard Divertor supplied
- Optional filtered divertor available
- Easypress pump control supplied
- Durable & Robust
- Low Maintenance
- Easy Access
- Easy Installation

- **Ultra Range**
- High Strength HDPE Bodies
- 2000 ltr - 6000 ltr sizes available
- Suitable for watering garden
- Suitable for car washing
- Suitable for Washing machines
- Suitable for Toilet flushing
- High specification vortex filter
- Durable & Robust
- Low Maintenance
- Easy Access
- Easy Installation

Rainwater harvesting solutions are not just for the domestic market, they are a very cost-effective solution when used in commercial premises or public buildings. In both of these environments there is often a high level of water consumption by staff and production processes, this can be substantially reduced using rainwater recycling. Rainwater storage tanks can be placed in suitable position to take advantage of the roof or parking capacity and the harvested rainwater can then be used for flushing toilets, fleet washing and landscape watering as well as production processes. Rainwater harvesting solution of this nature makes perfect economic, commercial and environmental sense.
